## Protection parts for batteries on ALL the Fun Cup

For safety reasons, we are asking you to add protection on the positive pole of your batteries to avoid short-circuit in case of crash.

Depending on the batteries you're using (figure 1, reference E 11, or figure 2, reference E 11 TD), you will respectively have to install straight protection (figure 3, reference E 028 D) or an angled one (figure 4, reference E 028 C).

Figure 1: Standard battery (E 11)

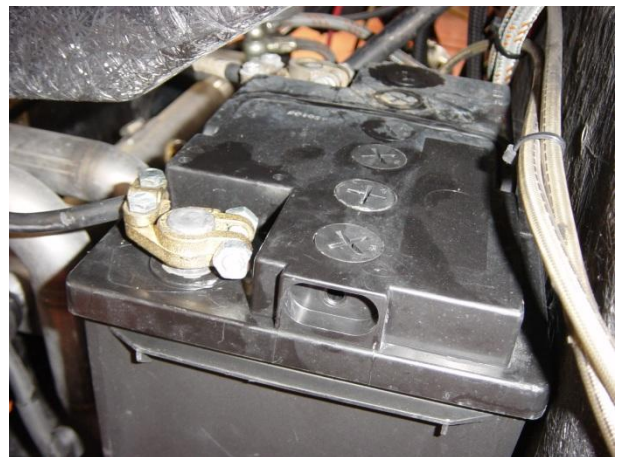

Figure 2: « TDI » battery (E 11 TD)

Figure 3: Straight protection for standard battery

Figure 4: angled protection for « TDI » battery

Please, also make sure that your fuel pipes are well fixed in the neighborhood of the battery and that no conducting parts can short-circuit the poles of your battery. (figure 5)

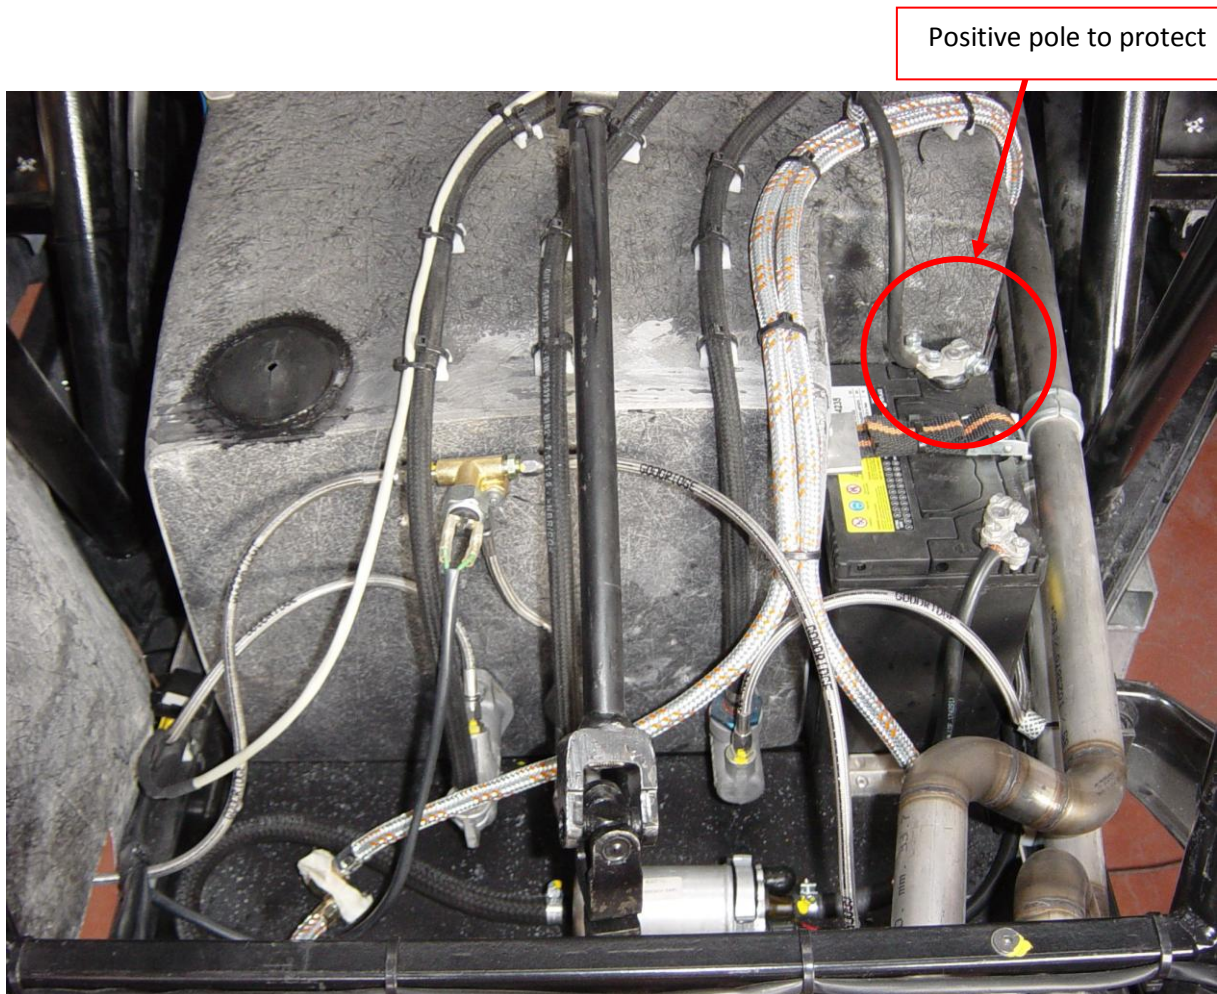

Figure 5: Good fixation of the wiring and pipes in the neighborhood of the battery

PS: Don't wait before ordering. During the races our quantities of spare parts are limited.
