

# **IMPORTANT**

We have become aware that three of the retractable steering wheel hubs that have been used on the Fun Cup cars for the past seven years have failed. Two in accidents and one whilst driving and as you can imagine the consequences, in case of a break on the track, could be catastrophic. These parts are compulsory as instructed by the FIA and are for limiting impact injuries in the case of an accident.

We, therefore, **strongly recommend** that all teams replace the part at the start of every season. In addition, we also recommend that the item is included for inspection during the standard race preparation. The part number is K51.
